APICALLY

AI Chatbot Application

- ## Project Overview

The AI Chatbot is a web-based application that allows users to communicate with an intelligent chatbot through a conversational interface. The application follows a client-server architecture where the React frontend communicates with a Python backend through REST APIs.

- ## Technology Stack

Frontend: React.js, HTML5, CSS3, JavaScript

Backend: Python(Django)

API: REST API

AI: Generative AI / LLM API

Database: SQLite

Version Control: Git & GitHub

- ## Objectives

1.To provide an interactive AI-powered chatbot.

2. To allow users to ask questions using natural language.

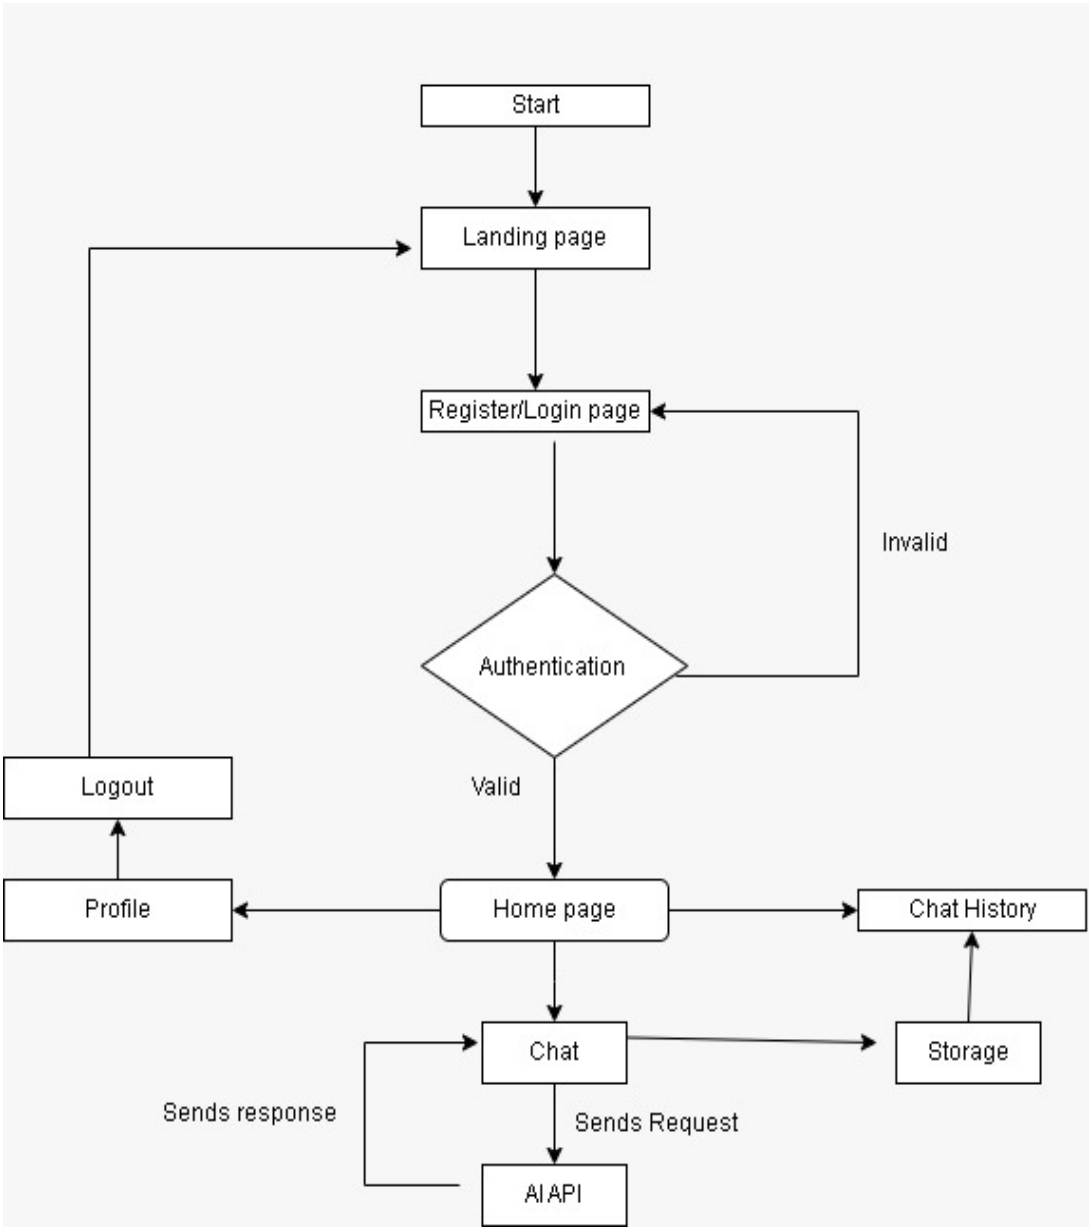

3. To generate relevant answers using an AI model.

4. To maintain user conversations and chat history.

5. To provide secure user authentication.

6. To create a responsive and user-friendly interface.
